Please find below and/or attached an Office communication concerning this application or proceeding.

## Office Action Summary

Application No.

09/838,852

Applicant(s)

ALLEN, RICHARD J.

Examiner

Linzy McCartney

Art Unit

2671

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 20 January 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-8 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-8 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 2, 5, and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,630,931 to Trika et al. (Trika) in view of the admitted prior art further in view of Bekaert et al., "Viewing in 3D" (Bekaert).

- a. Referring to claim 1, Trika discloses generating a model of the scene using a homogenous coordinate system which uses a first, second, and third orthogonal axes and a homogeneity value (column 5, lines 1-15) and obtaining one or more further display images from one or more further viewpoints aligned along the first axis with the first viewpoint and displaced from the first viewpoint by a multiple of a displacement value, by updating the first axis value of the first display image using the displacement value and the homogeneity value (column 5, line 39 – column 6, line 5). Trika does not explicitly disclose obtaining a first display image from a first viewpoint by transforming vertex positions from the 3D scene into vertex positions in a frustum viewing region using a projection matrix, the projection matrix having terms derived from the position of the viewpoint relative to the frustum viewing region. Applicant discloses that it is known to generate an image of a 3D scene from a known viewpoint by carrying out transformation on vertex positions from the 3D scene into vertex positions in a frustum

viewing region, using a projection matrix. Bekaert discloses the projection matrix having terms derived from the position of the viewpoint relative to the frustum viewing region (page 18, paragraph 1, Fig. 6). At the time invention was made, it would have been obvious to a person of ordinary skill in the art to modify the teachings of Trika by transforming vertex positions from the 3D scene into vertex positions in a frustum viewing region using a projection matrix as taught by the admitted prior art, and Bekaert. The suggestion/motivation for doing so would have been to improve image realism of the displayed image (Applicant, page 2, paragraph 2) and to convert the 3D world coordinates of the vertices to 2D screen coordinates to determine which screen pixel should represent each vertex (Bekaert, page 2, paragraph 2).

b. Referring to claim 2, Trika discloses applying lighting conditions when creating the first image (column 6, lines 10-12). Trika does not explicitly disclose wherein texture is applied when creating the first image. At the time the invention was made it would have been obvious to one of ordinary skill in the art to modify the method of Trika to apply texture to the image, Official Notice taken. The suggestion/motivation for doing so would have been because it would allow finer and more intricate detail to be displayed without the cost of rendering more polygons or geometric primitives.

c. Referring to claim 5, Trika discloses wherein one or more further images are obtained by a graphics processing device without further use of the 3D scene data (column 5, line 59 – column 6, line 5).

d. Referring to claim 6, Trika discloses a memory device storing a model of the scene using a homogenous coordinate system which uses a first, second, and third

Art Unit: 2671

orthogonal axes and a homogeneity value (column 5, lines 1-15; Fig. 1) and wherein a graphics processor further comprises means for generating one or more further images from one or more further viewpoints aligned along the first axis with the first viewpoint and displaced from the first viewpoint by a multiple of a displacement value, by updating the first axis value of the first image in the viewing region using the displacement value and the homogeneity value (column 5, line 39 – column 6, line 5; Fig. 1). Trika does not explicitly disclose a graphics processor for transforming vertex positions from the 3D scene into vertex positions in a frustum viewing region to define a first image in the viewing region, the graphics processor deriving a projection matrix in dependence on the position of the viewpoint relative to the frustum viewing region, the projection matrix being used to translate image coordinates from the 3D scene into the viewing region. Applicant discloses that it is known for a graphics card to generate an image of a 3D scene from a known viewpoint by carrying out transformation on vertex positions from the 3D scene into vertex positions in a frustum viewing region, using a projection matrix (Applicant, page 2, paragraphs 1 and 2). Bekaert discloses deriving a projection matrix in dependence on the position of the viewpoint relative to the frustum viewing region (page 18, paragraph 1, Fig. 6). At the time invention was made, it would have been obvious to a person of ordinary skill in the art to modify the apparatus of Trika by transforming vertex positions from the 3D scene into vertex positions in a frustum viewing region using a projection matrix as taught by the admitted prior art, and Bekaert. The suggestion/motivation for doing so would have been to improve image realism of the displayed image (Applicant, page 2, paragraph 2) and to convert the 3D world

Art Unit: 2671

coordinates of the vertices to 2D screen coordinates to determine which screen pixel should represent each vertex (Bekaert, page 2, paragraph 2).

3. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Trika in view of the admitted prior art further in view of Bekaert as applied to claim 2 above further in view of U.S. Patent No. 5,856,829 to Gray III et al. (Gray).

a. Referring to claim 3, Trika does not explicitly disclose wherein the homogeneity value is inversely proportional to a depth value measured along the third orthogonal axis, and is used for interpolation of texture values. Gray discloses wherein the homogeneity value is inversely proportional to a depth value measured along the third orthogonal axis, and is used for interpolation of texture values (column 8, 38-43; Abstract). At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to further modify the teachings of Trika to make the homogeneity value inversely proportional to a depth value measured along the third orthogonal axis, and use the homogeneity value for interpolation of texture values as taught by Gray. The suggestion/motivation for doing so would have been to avoid the additional cost and complexity required in computing both a z value and the  $1/w$  value (Gray, column 5, line 56 – column 6, line 2).

4. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Trika in view of the admitted prior art further in view of Bekaert as applied to claim 1 above further in view of U.S. Patent No. 5,808,792 to Woodgate et al. (Woodgate) still further in view of Halle, “Autostereoscopic Displays and Computer Graphics” (Halle).

Art Unit: 2671

- a. Referring to claim 4, the modified method of Trika does not explicitly disclose wherein the first image and the one or more further images are combined to form an interleaved image for supply to an autostereoscopic display device. Woodgate discloses wherein the first image and the one or more further images are combined to form an interleaved image for supply to an autostereoscopic display device (column 1, lines 10-16). At the time the invention was made, it would have been obvious to one of ordinary skill in the art to further modify the method of Trika by supplying the formed images to an autostereoscopic display device as taught by Woodgate. The suggestion/motivation for doing so would have been to present an image without the use of glasses or other viewing aids and because autostereoscopic displays offer the best approximation to the optical characteristics of a real object (Halle, page 58, column 3, paragraph 1).
5. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Trika in view of the admitted prior art further in view of Bekaert as applied to claim 6 further in view of U.S. Patent No. 6,014,144 to Nelson et al. (Nelson).

- a. Referring to claim 7, the modified apparatus of Trika does not explicitly disclose wherein the graphics processor comprises a graphics acceleration board. Nelson discloses the aforementioned limitation (Fig. 2). At the time invention was made, it would have been obvious to a person of ordinary skill in the art to further modify the apparatus of Trika by incorporating a graphics acceleration board as taught by Nelson. The suggestion/motivation for doing so would have been to off-load the rendering functions from the host processor thus improving system performance (Nelson, column 1, lines 13-17).

Art Unit: 2671

6. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Trika in view of the admitted prior art further in view of Bekaert as applied to claim 6 above further in view of Woodgate still further in view of Halle.

a. Referring to claim 8, Trika does not explicitly disclose generating multiple images used to drive the display panel as an autostereoscopic display. Woodgate discloses the aforementioned limitation (column 1, lines 10-16). At the time the invention was made, it would have been obvious to one of ordinary skill in the art to further modify the method of Trika by supplying the formed images to an autostereoscopic display device as taught by Woodgate. The suggestion/motivation for doing so would have been to present an image without the use of glasses or other viewing aids and because autostereoscopic displays offer the best approximation to the optical characteristics of a real object (Halle, page 58, column 3, paragraph 1).

#### ***Response to Arguments***

7. Applicant's arguments filed 1/20/04 have been fully considered but they are not persuasive. Applicant contends the combination of Trika fails to teach updating the image based on a homogeneity value and a multiple of a displacement value. Trika clearly discloses updating the image based on a homogeneity value and a multiple of a displacement value (column 5, line 15 – column 6, line 5). In particular note the homogeneity value ( $w$ ) disclosed in equation 5 is multiplied by a displacement value ( $K_1 + K_2$ ) in equation 10 (Note that  $Z_v$  contains  $Z_w$  which in turn contains  $w$ ; see equations 5, 9, and 10) to produce the updated image value ( $X_v^R$ ).

Art Unit: 2671

*Conclusion*

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Linzy McCartney** whose telephone number is **(703) 605-0745**. The examiner can normally be reached on Mon-Friday (8:00AM-5:30PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Mark Zimmerman**, can be reached at **(703) 305-9798**.

**Any response to this action should be mailed to:**

Commissioner of Patents and Trademarks

Washington, D.C. 20231

**or faxed to:**

**(703) 872-9314 (for Technology Center 2600 only)**

Art Unit: 2671

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive,  
Arlington, VA, Sixth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application or proceeding  
should be directed to the Technology Center 2600 Customer Service Office whose  
telephone number is (703) 306-0377.
